

Assignment 1 Reflection

1. Which of the tools introduced so far have you had previous experience with? Which were new?

Answer: I have had experience with Spyder and VS Code. I have used GitHub and pytest but not to the extent I will for this class. I also have experience with conda and python environments which was helpful.

2. What part of this assignment was the most difficult?

Answer: Overall getting my environment setup was the most difficult. This was the first time using github but I think it was worth the effort. I think it is a great way to be organized and stay organized during the course. It took a few tries to get the pytest commands down. I was able to test individual tasks and test the entire assignment by the end.

3. To what extent did you find yourself looking things up online? Describe the tactics you used to find the information you needed -- and how you filtered out the content that wasn't relevant or helpful.

Answer: I looked up the XOR operator using Google and it quickly told me what it was. I had to look up how to prevent my formatter from formatting task 3 lines which were breaking the test cases. I used ChatGPT and it gave a few examples of the comment I needed to add to turn the formatter off for a block of code.

4. I hope you made allies and friends in doing this assignment. Did you work with others? What was that like?

Answer: I did not reach out on Piazza yet. I'm slightly concerned with the pace and working with others is hard to coordinate with work. I will try to stay engaged with Piazza throughout the course.

5. Describe one thing that you learned while working on this lesson that stood out as useful or interesting.

Answer: In DS701 I started using GitHub but for this class when I saw the repo online I forked the repo and found that extremely helpful. I want to use version control but this also organized all of the files for me. It was great. I never really used pytest and for this assignment I thought it was a good introduction to it.
